Subject: Microsoft Settlement

As an entrepreneur developer of high tech systems I believe it is important to provide to our children immediately the tools to enable them to develop skills to equip them for their future. That we seem to be more concerned about whether the services offered in settlement bear the name Microsoft or Sun or Apple or Linux smacks of politics above the needs of children. Let s get the systems into the schools NOW! The fact that Windows is by the far the most dominant operating system in the world is a pretty clear indicator that children schooled in systems based on Windows will not exactly be trained in an outmoded or marginal system. Get with it!
